(ii) DIVERGENCE THEOREM: $\int_V(\nabla\cdot\underline{F})dV=\oint_S\underline{F}\cdot d\underline{S}$ WHERE $\underline{F}$ IS A VECTOR FIELD, V IS A VOLUME BOUNDED BY CLOSED SURFACE S, dS IS OUTWARD POINTING NORMAL ON SURFACE (IE $\hat{n}dS$)

2014 P1Q1 (ii)

$$\int_V \nabla\cdot(\underline{F}\times\underline{G})\,dV = \oint_S (\underline{F}\times\underline{G})\cdot \underline{dS}$$ BY DIVERGENCE THM.

$$\nabla\cdot(\underline{F}\times\underline{G}) = \partial_i(\epsilon_{ijk}F_j G_k) =$$

$$= \epsilon_{ijk}\left[(\partial_i F_j)G_k + F_j(\partial_i G_k)\right] =$$

$$= G_k\epsilon_{kij}\partial_i F_j + \epsilon_{jki}F_j\partial_i G_k =$$

$$= \underline{G}\cdot(\underline{\nabla}\times\underline{F}) - \underline{F}\cdot(\underline{\nabla}\times\underline{G})$$

PLUG BACK IN:

$$\int_V \left[\underline{G}\cdot(\underline{\nabla}\times\underline{F}) - \underline{F}\cdot(\underline{\nabla}\times\underline{G})\right]dV = \oint_S (\underline{F}\times\underline{G})\cdot\hat{\underline{n}}\,dS$$

$$\underline{F} = (xz\sin(yz) + x^3,$$
$$\cos(yz),$$
